

Company Profile

TeamDev is a software development company providing services in Java, .NET, and mobile application development. TeamDev authors a family of products for Java-native integration with browsers, Microsoft Office and COM in general, desktop, native libraries and system API. TeamDev also supports open-source development with OpenFaces and Selenium Inspector projects.

Mission

We see our mission in providing quality software, support and services to minimize development effort and replace the routine with a pleasure of creating software easily and fast.

Retrospective

Delivering dozens of projects, from small desktop applications to complex enterprise-level solutions, we were often plagued with an arduous task of linking the Java platform with a variety of other platform-dependent technologies.

- To simplify Java-native integration, in 2002 we introduced our first commercial product—JNIWrapper library, which eventually evolved into the core technology for an entire family of Java platform integration solutions.
 - Other products—ComfyJ, JExcel, JExplorer, JxBrowser and JxCapture followed in 2003–2007 to meet the growing demand for tight integration with Microsoft technologies.
 - In 2006 we successfully entered a market of UI components with QuipuKit—a set of AJAX-enabled JSF components and a client-side validation framework. The product later evolved into OpenFaces—an open-source library with fully revised code base and JSF 2.0 support.
 - SevenHats, is the most recent effort of TeamDev, launched in 2008 as an open-source project for web and enterprise development built on top of OSGi and Spring Framework. SevenHats includes integration with such technologies and frameworks as JSF, Facelets, Spring DM, Spring WebFlow, Spring Security, Hibernate and others.
-

Nowadays

Today, in creating professional development tools, we pursue the goal of making them as much useful as affordable to everyone. By offering fair and flexible pricing and licensing models, free yearlong technical support and open communication, we live up to the idea of greater openness and affordability of commercial products for the global development community.

Our Values & Beliefs

We are open to the development community by making our products affordable to individuals and companies alike.

Open to new ideas by letting any outside developer contribute to the development of our products, released or not yet.

Open to everyone by providing free technical support to make our customers feel comfortable with our products.

Open to innovation by adopting new technologies, methodologies and tools to make our products and services better.

Our Services

Custom Software
Development

- Custom Java platform integration solutions
- Web service-based applications
- Desktop application development
- E-commerce applications

Design

- User interface design and redesign
- Graphic design

IT Services

- Remote IT Team
- Analysis and consulting on systems architecture
- Disaster recovery and emergency cases support
- Customization, support and administration of Atlassian collaboration tools, Google Apps, Microsoft-based networks

Our Expertise

Our basic expertise is Java technology for multi-platform development as well as for Web development, but our skill set is not limited to it. We extensively use the wide range of technologies for our integration solutions including:

Java

- Java EE, Java SE, JNI, EJB, JPA, XML, Spring, Hibernate, TopLink, OSGi
- Apache Axis, Codehous xFire
- JSP, Servlets, JSF, Struts, WebWork, Ajax, JavaScript, XHTML
- Swing, SWT
- Oracle, DB2, Microsoft SQL Server, SAPDB, PostgreSQL, MySQL, FireBird, Derby, Hypersonic
- PL/SQL, Transact-SQL, Oracle Forms
- ERwin Data Modeler, BPwin, PowerDesigner 6.0–12.0
- IntelliJ IDEA, Eclipse, NetBeans
- Ant, Maven, Cruise Control, TeamCity, Hudson
- JUnit, TestNG, Emma, Clover, Selenium
- Apache Tomcat, JBoss, Weblogic, WebSphere, Orion, Resin, Oracle Application Server

.NET	<ul style="list-style-type: none">- OOD & OOP & Analysis- C#, .NET 1.1/2.0/3.5, VS 2008- ASP.NET, ADO.NET, MS SQL Server 2005, Linq, TSQL- XML/XSLT- Windows Services, Web Services, Remoting, WCF- ActiveX/COM- AJAX, Ajax Control Toolkit, JavaScript, DHTML, JQuery, Silverlight- Microsoft Enterprise Library- Cruise Control, NUnit, NAnt, NVelocity- CVS, VSS, TFS, SVN- IIS 6.0/7.0
Databases	<ul style="list-style-type: none">- MS SQL, Oracl, MySQL, PostgreSQL, Informix, Interbase/Firebird
Other Skills	<ul style="list-style-type: none">- C/C++- Perl, PHP, Python, VB/VBA
Mobile	<ul style="list-style-type: none">- iOS- Android- BlackBerry
IT Services & Consulting	<ul style="list-style-type: none">- Google Apps. Migration support and administration.- Atlassian JIRA & Confluence. Setup, customization and ongoing administration.- Enterprise network design, support and troubleshooting- VoIP and Unified Communications support- Unix/Linux servers setup, support and maintenance- Application servers: Apache 1.x and 2.x, Tomcat 4.1/5, Sun One AppServer 7/8 (J2EEAppServer)

IT Services & Consulting
on Microsoft Technologies

- Systems security assessment
- Windows Server 2008 and Active Directory
- Terminal Services and Application virtualization
- Server virtualization and Hyper-V
- Datacenter management and maintenance
- Exchange Server 2003/2007/2010. Maintenance and Migration.
- Disaster Recovery planning and Data Protection (DPM)
- IIS configuration and fine-tuning
- SharePoint configuration, customization and branding
- Systems monitoring with Systems Center Operations Manager
- Managing and maintaining existing infrastructures
- SQL Server 2005/2008 configuration and maintenance
- Windows Server clustering

Combining innovative and industry-proven technologies and tools, our team can design and implement any required business functionality, eliminate all cross-browser incompatibilities and ensure absence of any security vulnerabilities across the system.

Our Products

Java Platform Integration

JNIWrapper

Supporting various operating systems, it provides simplified access to native code from Java applications without using Java Native Interface (JNI). JNIWrapper allows developers to use extensively the capabilities of the underlying platform, while retaining full control over program flow on the Java side.

ComfyJ

A bidirectional Java-COM bridge enabling seamless interaction between the Java platform and COM technologies. ComfyJ makes it possible to use COM/OLE/OCX/ActiveX objects from Java applications and implement Java objects as COM objects, without writing native code.

JExcel

A library for Windows enabling tight integration and management of Microsoft Excel workbooks and worksheets in Java applications.

JExplorer

A library for Windows providing a convenient Java API to embed Microsoft Internet Explorer, both as a visual or non-visual component, into Java applications.

JxBrowser

A cross-platform library for seamless integration of 3 native browsers into Java applications on Windows, Linux and Mac OS X.

JxCapture

A cross-platform library providing a comprehensive Java API for performing various screen capture into image and video in Java applications on Windows and Mac OS X.

JxFileWatcher

A cross-platform library that provides convenient Java API for monitoring file system events. It is available for Windows, Linux and Mac OS X platforms and supports both 32 and 64-bit versions of these OS.

Consumer Products

Travel Pocket

Personal travel expense tracker for iPhone, designed to carefully reflect all user's cash operations while on a trip. The tool makes it easy to track expenses in any world currency. Be it a spending on transport, dinner, or just leaving a tip, the tool will store the information carefully and visually.

Web Development

**OpenFaces**

OpenFaces is an open-source JSF library enabling developers to easily build dynamic Web applications. It includes an extended set of JSF components, Ajax framework and a validation framework that shifts the traditional JSF validation to the client side.

**SevenHats**

SevenHats is an open source Java development library built on top of OSGi and Spring Framework. Its provides OSGi-based approach for the most specific use cases in enterprise development, first of all for web applications. In particular, it provides flexible persistence solution based on JPA, security system, user management, web flow control system and others.

Our Team

Our team is the company's most valuable asset. We always attract specialists with a profound technical background, responsible attitude and creative approach, which all contribute to a long-standing success of our company. Today, our team is comprised of more than 50 highly skilled and motivated professionals committed to perfection in all aspects of their work.

Our Customers

Our products and services have helped many developers and companies in achieving their business goals. Our customers include more than 1300 companies across the world and range from individuals to multinational organizations. They represent many diverse industries such as information technology, medicine and health care, education, telecommunications and media, automotive, banking and finance, airspace and many more. Among them are well-known companies like Google, IBM, Cisco, Adobe, Hewlett-Packard, Motorola, Siemens, Airbus, Mercedes-Benz, eBay, Jive Software, Genuitec, American Express and many more.

Doing Good

- We support open-source development by donating our products to open-source communities and participating in co-development of open-source projects.
- Promoting the idea of free access to commercial software for non-commercial purposes, we give away our products to educational institutions, educators and students worldwide.
- We offer free training opportunities for talented youth who want to participate in real-life projects and study on-site at TeamDev's office.
