

TeamDev

Company Profile

TeamDev is a Java software development company headquartered in Kharkov, Ukraine. Since 1994 we have been providing cutting-edge Java platform integration solutions and development services to our customers worldwide.

Mission

We see our mission in providing quality software, support and services to minimize development effort and replace the routine with a pleasure of creating software easily and fast.

Retrospective

Delivering dozens of projects, from small desktop applications to complex enterprise-level solutions, we were often plagued with an arduous task of linking the Java platform with a variety of other platform-dependent technologies.

- To simplify Java-native integration, in 2002 we introduced our first commercial product—JNIWrapper library, which eventually evolved into the core technology for an entire family of Java platform integration solutions.
 - Other products—ComfyJ, JExcel, JExplorer, JxBrowser, JxCapture and JxFileWatcher followed in 2003–2009 to meet the growing demand for tight integration with Microsoft technologies.
 - In 2006 we successfully entered a market of UI components with QuipuKit—a set of AJAX-powered JSF components and a client-side validation framework, later significantly extended and evolved into an open source JSF components library known as OpenFaces.
 - In 2009 we launched Selenium Inspector, an open source add-on on top of Selenium for simplifying automated testing of Web components for wide variety of HTML rendering frameworks like JSF component libraries, Spring MVC, Struts, or any other library or abstraction.
 - SevenHats, is the most recent effort of TeamDev, launched as an open-source project for web and enterprise development built on top of OSGi and Spring Framework. SevenHats includes integration with such technologies and frameworks as JSF, Facelets, Spring DM, Spring WebFlow, Spring Security, Hibernate and others.
-

Nowadays

Today, in creating professional development tools, we pursue the goal of making them as much useful as affordable to everyone. By offering fair and flexible pricing and licensing models, free yearlong technical support and open communication, we live up to the idea of greater openness and affordability of commercial products for the global development community.

With our main focus on Java, we are constantly expanding the list of our competencies due to the growing demand for cross-technology solutions from the non-Java world. This allows us to successfully complete projects that can combine Java, .NET, iPhone, BlackBerry and other technologies.

Our Products

Created with “easy does it” idea, our professional development tools empower developers to do their job more efficiently and make the software development process more streamlined and straightforward.

Java Platform Integration

JNIWrapper

Supporting various operating systems, it provides simplified access to native code from Java applications without using Java Native Interface (JNI). JNIWrapper allows developers to use extensively the capabilities of the underlying platform, while retaining full control over program flow on the Java side.

ComfyJ

A bidirectional Java-COM bridge enabling seamless interaction between the Java platform and COM technologies. ComfyJ makes it possible to use COM/OLE/OCX/ActiveX objects from Java applications and implement Java objects as COM objects, without writing native code.

JExcel

A library for Windows enabling tight integration and management of Microsoft Excel workbooks and worksheets in Java applications.

JExplorer

A library for Windows providing a convenient Java API to embed Microsoft Internet Explorer, both as a visual or non-visual component, into Java applications.

JxBrowser

A cross-platform library for seamless integration of Mozilla Firefox browser into Java applications on Windows, Linux and Mac OS X.

JxCapture

A cross-platform library providing a comprehensive Java API for performing various screen capture operations in Java applications on Windows and Mac OS X.

JxFileWatcher

A cross-platform library that provides convenient Java API for monitoring file system events: creation, renaming or removal of files and subfolders within any specified folder.

OpenFaces

Designed to extend capabilities of the JSF technology, OpenFaces provides a set of ready-to-use AJAX-based components, an AJAX framework and a powerful client-side validation framework that allow developers to easily create a rich and dynamic Web UI.

SevenHats

SevenHats is an open source Java development library built on top of OSGi and Spring Framework. It provides OSGi-based approach for the most specific use cases in enterprise development, first of all for web applications. In particular, it provides flexible persistence solution based on JPA, security system, user management, web flow control system and others.

Selenium Inspector

An open source library for simplifying automated testing for Web applications. It is built on top of the popular Selenium testing framework, and enhances its abilities for component-oriented testing, and simplifies testing of any HTML-based applications as well.

Our Customers

Our products and services have helped many developers and companies in achieving their business goals. Our customers include more than 1300 companies across the world and range from individuals to multinational organizations. They represent many diverse industries such as information technology, medicine and health care, education, telecommunications and media, automotive, banking and finance, airspace and many more.

Among them are well-known companies like Google, IBM, Cisco, Adobe, Intel, Audi AG, Hewlett-Packard, Motorola, Kodak, Siemens, PayPal, Ricoh, Airbus, Nokia Corporation, Mercedes-Benz, eBay, Genuitec, Procter & Gamble, American Express, Jive Software and many more.

Our Services

- Web and enterprise solutions (development of e-commerce, Ajax-based, Web service-based applications, etc.)
- Custom Java platform integration solutions (integration with native and COM/OLE/OCX/ActiveX libraries, platform-specific functionality, etc.)
- Desktop development (plug-in development, cross-platform development, integration with legacy software, etc.)

Our Skills

Java is a core of our expertise and is widely used for creating our products and services, but our skills are not limited to it. We actively use all most recent technologies for both Windows-based and non-Windows development as well as for Web. Our major technical competencies are:

- Java EE, Java SE,OSGi, JNI, EJB, JPA, XML, Spring, Hibernate, TopLink
- .NET 2.0, .NET 3.5, C#, LINQ, WCF, XML/XSLT, WinForms, Silverlight, ASP.NET, Entity Framework
- Apache Axis, Codehous xFire
- JSP, Servlets, JSE, Struts, WebWork, Ajax, JavaScript, XHTML
- Swing, SWT
- Oracle, DB2, Microsoft SQL Server, SAPDB, PostgreSQL, MySQL, FireBird, Derby, Hypersonic
- PL/SQL, Transact-SQL, Oracle Forms
- ERwin Data Modeler, BPwin, PowerDesigner
- IntelliJ IDEA, Eclipse, Ant, Maven, Cruise Control, TeamCity, Hudson
- JUnit, TestNG, Emma, Clover, Selenium
- Apache Tomcat, JBoss, Weblogic, WebSphere, Orion, Resin, Oracle Application Server
- iPhone, J2ME, BlackBerry, Android

Our Team

Our team is the company's most valuable asset. We always attract specialists with a profound technical background, responsible attitude and creative approach, which all contribute to a long-standing success of our company. Today, our team is comprised of more than 50 highly skilled and motivated professionals committed to perfection in all aspects of their work.

Our Values & Beliefs

We are open to the development community by making our products affordable to individuals and companies alike.

Open to new ideas by letting any outside developer contribute to the development of our products, released or not yet.

Open to everyone by providing free technical support to make our customers feel comfortable with our products.

Open to innovation by adopting new technologies, methodologies and tools to make our products and services better.

Doing Good

- We support open-source development by donating our products to open-source communities and participating in co-development of open-source projects.
 - Promoting the idea of free access to commercial software for non-commercial purposes, we give away our products to educational institutions, educators and students worldwide.
 - We offer free training opportunities for talented youth who wants to participate in real-life projects and study on-site at TeamDev's office.
-
